PC Engine • TurboGrafx-16 • Turbo Express • SuperGrafx • Turbo-Duo

*Logotypes are displayed for information purposes only. They do not imply an association between V-Note's Chronicle and their respective owners.

NEC's "TurboGrafx" project was a joint development between Hudson and NEC. Due to an inability to capture US licensing from developers fearful of Big N's market dominance, the platform faded into history. Passionate employees of NEC and Hudson, determined to keep the system relevant, continued development under a new brand - Turbo Technologies.

MagicEngine is delivered with a custom BIOS.

Some ROM's require an original BIOS, such as 'syscard3.pce', the Super System Card (version 3.01).

System Card 1.0 (PCE)
System Card 2.0 (TG-16)
System Card 2.1 (PCE)
System Card 3.0 (SCD2 - J)
System Card 3.1 (SCD2 - US)
(Place 'syscard.pce' in app folder.)
System Card 3 adds RAM to accommodate the SuperGrafx specs.

The 'Arcade Expansion' was for the PC-Engine only.

ROM converters are available, to play Japanese titles (except SuperGrafx) on US 'TurboGrafx-16' hardware.

TurboDuo is equipped with SuperGrafx hardware.

PSG Channels (Pattern Signal Generator)
Similar to MIDI.

ADPCM is a waveform audio format.

Ten no Koe Memory Bank

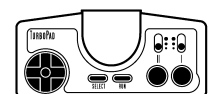

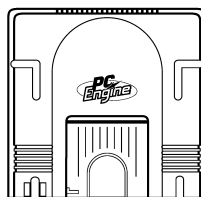

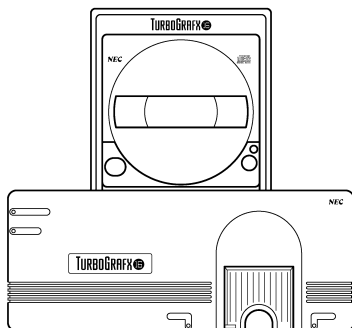

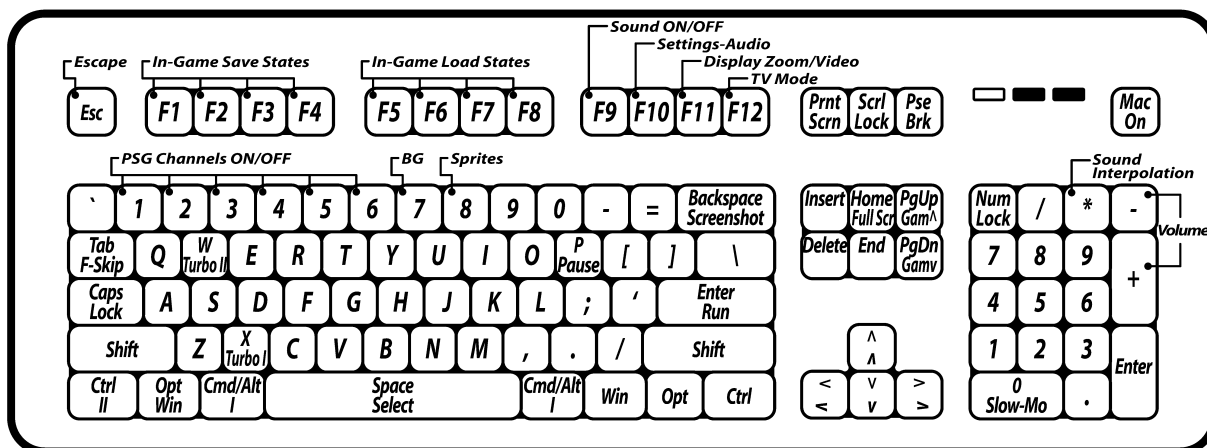

(Voices From The Sky)
Adds Additional Save Slots.

Games Express CD Card

For Games Express bootleg CD games.

Video Capture

FraPS
Video Mirror to Analog
